

Set screw location

Fig.1

If you want to keep the Filter Stages permanently coupled to each other:

Find the set screw located in the spring loaded guide (Fig.1) and using 1.5 mm allen key turn it until it hits the bottom (Fig.2). Make one revolution back (Fig.3) and leave it so.

Fig.2

Fig.3

Sometimes when using a long filter vertically, you may need to secure it from dropping to the ground. In that case, use the locking screw as shown on Fig.4
